Sanisa: Okay, good night everyone. Back again with us from TEAM H! My name is Sanisa.

Anindyo: My name is Muhammad Anindyo.

Handini: And my name is handini.

Sanisa: Okay, in this meeting today, October 3rd, 2020, we will discuss the app that we want to evaluate. Because we already have the app on our phone, we can immediately begin the discussion.

Sanisa: Okay, we are opening the app. Up here, in the home menu. Umm, from the front view, what are your opinions about this app? But first, we want to explain what Kescatin app is.

Handini: So, Kascatin is an app for to-be-braids....

Anindyo: … to gain infos and consultation (about marriage life).

Sanisa: What does Kascatin stand for? I forgot.

Handini: It stands for "Kesehatan Reproduksi Bagi Calon Pengantin" (Reproductive Health for to-be-braids).

Sanisa: Well, that's what we will evaluate.
Sanisa: So, how's the opinion?

Handini: I think it's nice, the colors are brightly yellow.

Anindyo: Yes, it is.

Sanisa: Ok, now we're moving to the next section, "Buku Saku (Pocket Book)" section.

Anindyo: Wait!

Sanisa: Ok, we're opening it.

Anindyo: Why is the color so plain? Only white… Should we make square menu boxes per category? So, it will be more beautiful, interesting.

Handini: Yes, we should. So, it won't be too monotone.

Sanisa: Yes, it can be. Then, what else?

Handini: Well, what should we do more in this section?

Sanisa: What do you think, Nin?

Anindyo: I think we should give an illustration above the menu, so it will be more attractive.

Handini: That's nice! So the color isn't that white or plain. Then, I think the writing's font is all the same and is too thin. I can barely read it.

Sanisa: Sure, later we change the font to be bolder. Then, for the illustration, we can make it ourselves or search for free stock. There's a web called "Unsplash.com", it provides free pictures / illustrations. We can check it later.

Anindyo: Okay, work on it later, either use our own picture or take it from the internet. So, we will remodel all the tiles and add attractive illustrations. Done... it's clear, isn't it?

Sanisa: "Buku Saku (Pocket Book)" section, clear! We're continuing to the next section.

Sanisa: Ok, this is "Cek Layak Hamil (Pregnancy-Worthy Check)" section.

Handini: It says this is a pregnancy plan for a couple, right? Maybe just try it!

Sanisa: Ok, I want to fill it. Hmm, to-be-braids? Yes. Ever been pregnant? No. Age? Between 20-35. How tall am i? Oh, 155. Weight? 55. Gee, there's upper arm circumference, how long am i? Maybe below 23.5. Anemia? It asks for the hemoglobin levels, maybe above 12. Chronic disease? There's no.... hemophilia? thalassemia? Should these be explained? So we know what hemophilia / thalassemia is or shouldn't?

Anindyo: I think it should? So, it gives an explanation or link for explaining the disease. The link is connected to wikipedia, health web, or even better, Kemenkes' official website.

Sanisa: Oh, right! So it's more reliable. Let me continue. Then, no hemophilia. Male's information? Also no. The last, infectious diseases? There's no too. Ok, ready to chech! Wow, my condition is ready to get pregnant! It told you to plan a pregnancy with your partner.

Handini: Please try to replace hemoglobin levels, upper arm circumference, and pregnancy status.

Sanisa: Ok, let's try it. Let's try to replace…. upper arm circumference… hemoglobin levels… Ouch, it says "
You are not advised to get pregnant. It's too risky. You get two warnings: upper arm circumference is too short and hemoglobin levels are anemia." It also gives you an advice "It's too dangerous for the mom and the fetus." It's so cool! However, it's still plain like it needs some attractive things. Just try it!

Anindyo: Wait! Yeah, it's still really plain. We will improve some parts later.

Handini: Ok. Well, our objectives on this app are done, aren't they?

Anindyo: Yes, they are. I think.

Sanisa: So, after this, we immediately determine who are the two persons that want to design, and later, we can immediately make the solution design.

Handini: Ok, thank you!

Anindyo: Well, later, we don't change the information at all from the overall information section. If possible, don't change the essence of the existing definitions. So, only change (improve) the design.

Sanisa: That's right! So, we don't change the definitions.

Anindyo: Only the visibility and interaction control.

Sanisa: Interaction control! Well, looks like our meeting has ended. Only up to those points that we can discuss…

Interruption:
Sanisa: Before this video ends, I want to add some ideas that haven't been delivered yet.
We have the initiative to add onboard features. This feature will ask users for common data (not the name, email, etc.) and process it into suggestions / tips. So, we will choose the age / gender / marital status which will be given tailored advice from the existing pocket book. This feature will be clearly seen in our design later. I think that's all for this interruption.…

Sanisa: Ok, let's close our meeting. Thanks for watching. Goodnight! Good bye!
